TITLE: VIEW ANGLE CONTROL SHEET AND DISPLAY DEVICE

THE COMMISSIONER FOR PATENTS P.O. Box 1450 Alexandria, VA 22313-1450

AMENDED ABSTRACT

The invention provides a A view angle control sheet having a wide view angle, in which diffuse light from a screen image source is effectively utilized to suppress a decrease in screen brightness while a decrease in image contrast caused by an outside light beam is suppressed to prevent generation of a ghost and thereby to improve contrast is improved. In a view angle control sheet, The lens portions having have trapezoidal shapes in section [[are]] arranged at predetermined intervals[[, a]]. A wedge-shaped portion between the lens portions adjacent to each other is filled with the same material as the lens portion or with a material different from the lens portion, the wedge-shaped portion has a bottom surface on a screen image source side while having a leading end on an observer side, and the following relationships hold: Nx £ Ny and -0.01 < Dn cosq < 0.002, where Nx is a refractive index of a material constituting at least a slope portion of the wedge-shaped portion, Ny is a refractive index of a material constituting the lens portion, and Dn is a ratio (Nx/Ny) of the refractive index Nx to the refractive index Ny, and a sectional shape of the wedge-shape portion has a wide bottom surface on the screen image source side.
